- The Tool Rebel Advent calendar is the perfect gift for the run-up to Christmas
- A unique and innovative mix of screwdriving tools and accessories for 25 screw profiles
- 9 Hex-Plus L-keys in a smart tool rack, each with a removable magnetiser and a clip for mobile use
- 5 blades (double blades for two profiles each) and 1 matching hand holder
- 6 Micro bits for screwdriving in electronics, precision engineering and modelling and 1 matching hand holder
- Of course including the iconic bottle opener in a new design for your collection

O holy night! The tools are brightly shining... In 2023, Wera is once again spreading the Christmas joy and this time our tool design was inspired by Santa's red and white coat.
9 chrome-plated L-keys with Hex-Plus advantage preventing rounded screws make a strong tool set for hexagonal socket screws.
A special bonus point is the convenient storage in a rack that can be set upright on the table or hung on the wall. On top of that, the rack includes a clever removable magnetiser that can be used to magnetise (and demagnetise) screws and tool tips; no more struggle to hold the screw with the second hand.
Also contains 5 blades with double tip as well as a matching handle; 10 different profiles can be bolted this way.
And especially useful for electricians, precision engineers and modellers: 1 Micro bit holder and 6 Micro bits, which turn working with very small screws into child's play.
The screw gripper is particularly useful and so much fun: Simply attached to the screwdriver blade, it can hold the screw and the second hand doesn't need to struggle securing the screw while working.
The best is yet to come? That's up to the fans to decide. Either way, the bottle opener is a must and of course also a part of this year's Advent calendar.

Clever storage for L-keys

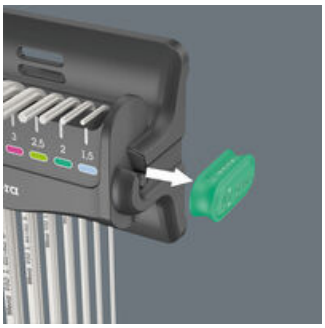

The rack for the L-keys can be set up on the table or hung on the wall.

Clip for take-away

The clip is removable; so the L-keys can also be taken out and about.

Removable magnetiser

The rack includes a removable magnetiser that can be used to magnetise (and demagnetise) screws and tool tips.

Hex-Plus

Hexagon socket screws are a problem, because the contact surfaces that transfer the force of the tool to the screw are very narrow. The consequence: the head of the screw can be damaged, usually rounding out the recess. Hex-Plus tools have larger contact surfaces to prevent this, driving from the flats of the recess, rather than the corners. Good to know: Hex-Plus tools fit into every standard hexagon socket screw!

Vario double-ended blades

The 6 mm double-ended blades of 175 mm length are out of high quality bit material which gives them a particularly long service life.

And this is how the gripper works

The screw gripper holds all screw profiles and sizes securely on the tool. Push the screw gripper onto the tip of the blade until the blade profile emerges from the rubber blade holder. Place the screw on the blade tip and fix it in the screw gripper. Pull the screw gripper further towards the handle until the two arms of the screw gripper rest on the screw head and are slightly spread.

For electricians, precision engineers and modellers

Especially useful for electricians, precision engineers and modellers: 1 Micro bit holder and 6 Micro bits, which turn working with very small screws into child's play.

With bottle opener in the Wera design

With a pretty bottle opener that you don't want to put down.
